

Weekly Cycle

If price extended away from Monday and Wednesday gave the signal, this is the day the trapped side usually gets forced out. Look for the trade back into the Monday Range.

Mark out Monday range every week and use it as opening range for that week.

Use Monday Box as a range reference and look for Monday range break & retest or sweep of Monday range high or low.

Tuesday is where you can look for sweep or break & retest of Monday range.

Wednesday is mid week reversal or continuation.

Thursday is one of the best days for weekly reversal and explosive move targeting trapped traders from Monday, Tuesday and Wednesday.

Friday is usually a continuation of Thursday.
